

Stop external cyber threats before they reach your business.

Cybersee watches the dark web, Telegram, app stores and social media for your leaked credentials, phishing sites and impersonators, then gets them taken down. Built and hosted in Saudi Arabia.

THE PLATFORM

Four modules, one view of your external risk

Brand Protection

Lookalike domains, phishing sites, fake accounts, fake apps and executive impersonation.

Dark Web Intelligence

Leaked credentials, stealer logs, data and access for sale, and Arabic and English chatter.

Attack Surface Monitoring

Forgotten assets, exposed services, outdated technology and certificate issues.

Takedown Service

Removal of phishing sites, domains, accounts and apps, with monitoring for their return.

WHO WE PROTECT

Banking and fintech

Insurance

Government

Healthcare

Education

Telecommunications

E-commerce and retail

Energy and utilities

Aviation and logistics

Hospitality and tourism

Real estate

Media

THE PROBLEM

The attack already started. You just haven't seen it yet.

Most breaches and fraud campaigns begin outside your network, on sites and channels your team never looks at. By the time a customer complains, the damage is done.

HOW IT WORKS

See. Verify. Remove.

1 See**We watch where attackers work**

Dark web markets, Telegram, app stores, social platforms and new domains, in Arabic and English.

2 Verify**Analysts confirm every alert**

Evidence is collected automatically and each finding is verified before it reaches you.

3 Remove**We take threats down**

Removal is handled with registrars, hosts and platforms, then monitored for return.

BUILT FOR SAUDI ORGANIZATIONS

Local by design

**Hosted in Saudi Arabia**

Customer data is stored and processed inside the Kingdom.

**Arabic-native**

Arabic channels, forums and slang are monitored natively.

**Built for local regulation**

Supports NCA ECC, SAMA CSF and PDPL programs.

PLANS

Coverage sized to your organization

Starter

For teams that want to see their exposure and try the platform themselves. Free trial, then monthly.

Business

Every module with analyst-verified alerts, takedowns and integrations. Annual plan.

Enterprise

Unlimited domains and brands, executive protection, a dedicated analyst and custom reporting.

GET STARTED

Secure your external attack surface in 3 steps

From the first conversation to live protection, with a proof of concept on your real assets before you commit.

1 Sign up**Tell us what to protect**

Share your domains, brands, apps and key executives. We size your coverage and recommend a plan.

2 Proof of concept**Test it on your real assets**

We run Cybersee on your own domains and brands, then review the verified findings with you.

3 Go live**Monitoring and takedowns**

Connect your SIEM and ticketing tools, and our analysts start monitoring and removing threats.

CYBERSEE LABS

Free scans for your domain

**Dark Web Report**

Leaked credentials, infected devices and lookalike domains for your company.

**Attack Surface Scan**

Subdomains, open services and outdated technology attackers can see.
